Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Applicant's arguments with respect to claim 13 and 18 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamegai (US 5,442,614) in view of Endsley et al (US 6,005,613) in further view of Mishima et al (US 6,134,382).

[claims 13 & 18]

In regard to Claims 13 and 18, Tamegai discloses an image recording/reproducing method and apparatus for recording image information on a recording medium and for reproducing the image information thus recorded, comprising the steps of:

- At a time of recording image information on the recording medium, executing (Column 2 Lines 45+) at least one sub step of:
 - Setting so as not to execute a verify mode (Figure 5 step s3 shows the verifying of the recorded data as further explained in Column 6 Lines 17-24);

Art Unit: 2621

- Setting so as not to execute a re-reading operation (Figure 5 shows the executing of the re-reading operation from s4 wherein the data has not been written and thereby performs a re-read), and
- Setting so as not to execute an automatic defect exchange function (Column 1 Lines 23-30 describes the automatic defect exchange function); however, fails to disclose
 - When image information thus recorded on the recording medium in said executing step is read and displayed on a monitor for each frame, preventing the frame of the image information with a read error from being read again when the frame of the image information having been read just before the frame error and setting so as not execute a verify mode.

Endsley discloses a recording apparatus wherein image information is displayed when an error occurs. The image being displayed is the "old" frame that will be repeated instead of the current frame with the error, as described in Column 9 Lines 25-40. The displaying of the previous frame without error allows for the system to process the current error and alert user of the error. Furthermore, Tamegai fails to disclose the setting that does not execute a verify mode. It is noted Mishima et al discloses the option of not verifying the execution of recording which allows the GOP to jump within the data stream as described in Column 7 Lines 56+ through Column 8 Lines 1-20.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use the recording data and information apparatus, as disclosed by

Art Unit: 2621

Tamegai, and incorporate a system that shows the previous frame that does not have an error, as disclosed by Endsley, and further incorporate Mishima et al to provide an option of not verifying of the recording.
